## Tamworth at a glance

- The health of people in Tamworth is varied compared with the England average. Deprivation is lower than average, however about 3,200 children live in poverty. Life expectancy for both men and women is similar to the England average.
- Life expectancy is 9.8 years lower for men and 5.6 years lower for women in the most deprived areas of Tamworth than in the least deprived areas.
- Over the last 10 years, all cause mortality rates have fallen. The early death rate from heart disease and stroke has fallen and is similar to the England average.
- In Year 6, 16.9% of children are classified as obese. Levels of teenage pregnancy, GCSE attainment and breast feeding are worse than the England average.
- Estimated levels of adult 'healthy eating' and obesity are worse than the England average. The rate of hip fractures is worse than the England average. Rates of sexually transmitted infections, road injuries and deaths and hospital stays for alcohol related harm are better than the England average.
- Priorities in Tamworth include a focus on improving all healthy lifestyles by addressing obesity, alcohol, physical activity and diet, supporting the ageing population including reducing falls and ensuring young people get a good start in life. ## Deprivation: a national view

This map shows differences in deprivation levels in this area based on national quintiles (of the Index of Multiple Deprivation 2010 by Lower Super Output Area). The darkest coloured areas are some of the most deprived areas in England.

This chart shows the percentage of the population in England and this area who live in each of these quintiles.

## Health inequalities: a local view

This map shows differences in deprivation levels in this area based on local quintiles (of the Index of Multiple Deprivation 2010 by Lower Super Output Area). The darkest coloured areas are the most deprived in this area.

The lines on this chart represent the Slope Index of Inequality, which is a modelled estimate of the range in life expectancy at birth across the whole population of this area from most to least deprived. Based on death rates in 2006-2010, this range is 9.8 years for males and 5.6 years for females. The points on this chart show the average life expectancy in each tenth of the population of this area.

Legend as above

## Health inequalities: changes over time

These graphs show how changes in death rates for this area compare with changes for the whole of England. Data points on the graph are mid-points of 3-year averages of yearly rates. For example the dot labelled 2003 represents the 3-year period 2002 to 2004.

Trend 1 compares rates of death, at all ages and from all causes, in this area with those for England.

Trend 2 compares rates of early death from heart disease and stroke (in people under 75) in this area with those for England.

Trend 3 compares rates of early death from cancer (in people under 75) in this area with those for England.

### Trend 1: All age, all cause mortality

### Trend 2: Early death rates from heart disease and stroke

### Trend 3: Early death rates from cancer

## Health inequalities: ethnicity

This chart shows the percentage of hospital admissions in 2011/12 that were emergencies for each ethnic group in this area. A high percentage of emergency admissions may reflect some patients not accessing or receiving the care most suited to managing their conditions. By comparing the percentage in each ethnic group in this area with that of the whole population of England (represented by the horizontal line) possible inequalities can be identified.

Figures based on small numbers of admissions have been suppressed to avoid any potential disclosure of information about individuals.

7195	6796	34	33	21	283	<b>Local number of emergency admissions</b>
37.5%	38.5%	27.2%	34.9%	36.2%	24.2%	<b>Local value</b>
40.6%	41.1%	40.0%	45.3%	44.4%	38.0%	<b>England value</b>

The chart below shows how the health of people in this area compares with the rest of England. This area's result for each indicator is shown as a circle. The average rate for England is shown by the black line, which is always at the centre of the chart. The range of results for all local areas in England is shown as a grey bar. A red circle means that this area is significantly worse than England for that indicator; however, a green circle may still indicate an important public health problem.

- Significantly worse than England average
- Not significantly different from England average
- Significantly better than England average

Domain	Indicator	Local No. Per Year	Local Value	Eng Avg	Eng Worst	England Range	Eng Best
